Ideation Phase
Empathize & Discover

Date	03 October 2026
Team ID	SWTID-2026-3942
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Empathy Map: Spreadsheet Data Import into ServiceNow

What does the user THINK and FEEL?
what really counts • major preoccupations • worries & aspirations

- "The records must be right the first time."
- Worried that a wrong mapping or a repeated import will create duplicate employees.
- Hopes a bulk import will save hours of typing.
- Feels pressure to hand HR clean, usable data.

What does the user HEAR?
what friends say • what the boss says • what influencers say

- HR asking when the employee list will be available in ServiceNow.
- Colleagues saying the spreadsheet must be cleaned before it is loaded.
- Trainers and documentation recommending Import Sets and Transform Maps instead of manual entry.

ServiceNow Administrator

who must import employee data from a spreadsheet

What does the user SEE?
environment • friends • what the market offers

- A spreadsheet with Employee ID, Name, Email, Department and Location columns.
- ServiceNow Load Data, Transform Map and Transform History screens.
- Duplicate or mismatched rows when an import goes wrong.
- Managers who want department and location reports.

What does the user SAY and DO?
attitude in public • appearance • behaviour towards others

- Says: "Can we load the whole file in one go?" and "Which column is the unique key?"
- Prepares the spreadsheet with a header row and consistent values.
- Loads it into an Import Set table, maps the columns and runs the Transform Map.
- Checks Transform History and the target table, then builds reports for HR.

PAIN
fears • frustrations • obstacles

- Manual entry is slow and error-prone.
- Repeated imports can create duplicate employees.
- Column names in the file may not match the target fields.
- Problems with invalid rows show up only after the transform has run.
- A Personal Developer Instance can hibernate while work is in progress.

GAIN
wants / needs • measures of success • obstacles

- All rows load in one step.
- Employee ID is used to update existing records.
- Transform History proves what was inserted or updated.
- Reports and a dashboard give HR a clear view.
- The Transform Map can be reused for later imports.
